

The Objection To The Claims Under § 102

The claim was rejected under 35 U.S.C. 102(b) as being anticipated by Bankert et. al. (5,258,209) and Thomas Jr. (2,949,882).

Applicants request reconsideration and withdrawal of this objection for the following:

The results achieved by the invention are new, unexpected, and surprising.

Up to now, those skilled in the art never appreciated the advantage of the invention, although it is inherent.

The invention solves a different problem than the reference, and such different problem is recited in the claim.

Conclusion

For the above reasons, applicants submit that the claim is in proper form, and that the claim defines patentably over the prior art. Therefore they submit the application is now in condition for allowance, which action they respectfully solicit.

Conditional Request for Constructive Assistance

Applicants have amended the claims of this application so that they are proper, definite, and define novel art that, while inherent, was unknown, unexpected, or unappreciated.

Very respectfully,

Jack Mathews

John Ronald White

Attachment: Appendix to Amendment A With Replacement Paragraph Marked-Up to Indicate Changes

Appendix to Amendment A
With Replacement Paragraphs Marked-Up to Indicate Changes

Commissioner for Patents
Washington, DC 20231

Sir:

Pursuant to Rule 121, the following is a copy of all the paragraphs amended by the attached Amendment A, with all changes indicated by bracketing deletions and underlining additions:

Page 4, first paragraph, replace with the following new paragraph:

-- Fig. 1 represents a surface or table top device in shape of a cylinder. It is constructed of a hard clear plastic chamber 10 filled with distilled water and enclosed with a circular plastic cap 12 sealed along a grooved rim 14. The dimensions are the following: 10" height, 4" width, 4" depth. [The base is the device's cap, which is sealed.]

Page 4, second paragraph, replace with the following new paragraph:

-- Fig represents a hanging device. It is constructed of a soft clear plastic chamber 20 and filled with distilled water. The top side contains a plastic lip that can be sealed 18. The top plastic lip 18 has a mounting hole 16 directly in its center. The dimensions are the following: 12" height, 12" width, 1/2" depth.

Page 7, first paragraph, replace with the following new paragraph:

A method of repelling the common house fly and members of the house fly family [comprising refracting light through a clear liquid encapsulated in a sealed, clear plastic container] by refraction of light, comprising:

- (a) a sealed, firm, clear plastic container enclosing a clear liquid,
- (b) a sealed, flexible, clear plastic container enclosing a clear liquid.
